Accelerate Bioremediation

Gold Crew's Accelerate is a micro-solubilizing agent that increases the bio-availability of the hydrocarbon to the naturally present bacteria at the spill site. The addition of Accelerate yields rapid results in biodegradation rates reducing site maintenance costs.

When applied with water soluble fertilizer, Accelerate's deep penetrating action increases the diffusion of the nutrient, increasing the needed amendment for bacterial growth. These two actions rapidly reduce the hydrocarbon contaminant through biodegradation.

The Accelerate formulation acts like a biosurfactant does, allowing the naturally occurring bacteria to metabolize (eat) a hydrocarbon molecule. Effective in landfarming, secondary spill cleanup, or subsurface biodegradation enhancement.

This product comes in ready to use, or concentrate.
