## Gold Crew® TC

Spill Cleanup for Traffic Accidents  
To the  
Maximum Extent Practical

## About Gold Crew® TC

Gold Crew® has been engaged in hydrocarbon spill cleanup for over 50 years. Our water based, biodegradable formulation has passed the test of time by providing superior products that produce exceptional results.

Gold Crew® TC is our ideal formulation for the spill cleanup of vehicle operating fluids (VOF) from traffic accidents (TA). VOF pollutants are the most common liquid debris from TA's. If not properly cleaned up, during rain events the residual left behind from the typical "kitty litter" approach can create "rainbowing" and that contributes to stormwater runoff pollution.

Gold Crew® TC effectively addresses the complete cleanup of these pollutants in a safe, water based formulation that removes VOF's to the Maximum Extent Practical (MEP).

## SAFE \* SIMPLE \* EFFECTIVE

Spray the Gold Crew® TC around the spill and then saturate the spill to give even distribution

Scrub the solution to effectively mix and solubilize the hydrocarbon pollutant into the Gold Crew® TC. Mix well, working within the spill footprint

Use the absorbent pads to pick up the solution

Place the pads in the special orange bags designed to hold pollutant waste, tag and dispose of properly.
